2. Which biology course should I take?

For both NS and HBHS major, total 8 credits of introductory biology is required:

BIOG 1500 Investigative Lab (F/S, 2 cr) **AND**

Choose **two out of three** from the following lecture options:

1. BIOMG 1350 Cell and Development (F/S, 3 cr)
2. BLOG 1440 Comparative Physiology (F/S, 3 cr) **OR**
   - BLOG 1445 Comparative Physiology (Autotutorial) (F/S, 4cr)
3. BIOEE 1610 Ecology and the Environment (F/S, 3cr) **OR**
   - BIOEE 1780 Evolution and Diversity (F/S, 3cr)

*Cannot take both to fulfill this requirement

Among three lecture options, BLOG 1440 (or BLOG 1445) and BIOMG 1350 are popular courses and recommended if you are pre-med. You can take one bio course (either lab or lecture) in each semester over three semesters **OR** may want to take lab plus lecture in one semester and another lecture in another semester, completing all within two semesters.
