3. What are supplemental courses and do I need to take them?

Supplemental course credit will **not** be counted toward 120 graduation credits. The objectives of supplemental courses are to help students clarify course material, assist with problem analysis, in-depth questions and answers, and prepare for exams. There are supplemental courses in chemistry, biology, mathematics, economics, and physics and we strongly recommend those supplemental courses (especially chemistry and biology) to students whose preparation is not strong and/or who last took those courses many years ago. Please check the following link for more information.
