Jack R. Nation is currently the Ralph R. Thomas ’21 Professor of Psychology and of Toxicology at Texas A&M University. He received his PhD in Experimental Psychology from the University of Oklahoma and began his research career in animal learning and conditioning. In the early 1980s, his interests shifted to behavioral and molecular mechanisms associated with heavy metal toxicity. The bulk of his work in the area of neurotoxicology has focused on interactions between environmental toxicants and drugs possessing abuse liability. A focal area of interest has been the effect of developmental exposure to inorganic lead or cadmium on drug seeking and self-administration. He has published approximately 100 scientific articles in such journals as Brain Research, Neuropsychopharmacology, and Psychopharmacology. In 1995, Professor Nation was the recipient of the University Level Distinguished Achievement Award for Teaching at Texas A&M University.
