We are seeking healthy adolescent girls to volunteer for a study to help us understand how ovaries change during puberty.

Participants can receive up to $250.

This research study is for girls who had their very first period within the last 11 months.

Study visits include a belly ultrasound of the ovaries, a blood sample, and keeping a menstrual diary.

Email us at womensimaging@cornell.edu and include ‘OMG’ in the subject line to learn more!

**Email is not a secure form of communication and is subject to being viewed by a third party.**
