CONCENTRATION: Emerging Technology for Design

The MS in Emerging Technology for Design (ETD) introduces students to innovative emerging technologies as tools for creativity and research. Some examples of faculty research topics in ETD include: design computing and cognition, architectural robotics, design process and design visualization using Virtual Reality (VR) and Augmented Reality (AR), advanced visualization technologies for environment-behavior simulation, generative and parametric design and fabrication, Building Information Modeling (BIM) and simulation, and human-computer interaction as related to emerging technology for design.

CAREERS

Students who complete the ETD concentration within the MS in HER will be well positioned for careers in industry, research institutes, and academic settings employing virtual reality, augmented reality and other technologies for UX research and design.
